EDUCATION

University of Alaska Fairbanks, Bachelor of Science in Computer Science
Relevant coursework: Data Structures and Algorithms, Analysis of Algorithms, Operating Systems, Software Engineering, Programming Languages, Data Science, Statistics, Multivariable Calculus

EXPERIENCE

Undergraduate Research Assistant, UAF Data/AI Lab | Fairbanks, AK Aug 2026 – Present

- Develop a wildfire risk web app (Leaflet, Typescript) with a 5 day fire-danger forecast, an interactive map, and fire risk classifier for Alaska.
- Develop an AI chat assistant that answers questions by calling our own prediction tools through an MCP server with each app limited to its own tools (created ~4 MCP tools)
- Work with research teams in the Cohort to turn their Python Notebooks into web applications on the FireAID framework
- Working in a Dockerized, multi-service setup (web app, MCP server, MongoDB), shipping changes through GitHub pull requests with code review

Software Engineering Intern, Greensparc | Fairbanks, AK (Hybrid) May 2026 – Aug 2026

- Independently built a MERN-stack operator dashboard for a Claude-powered AI agent that recommends GPU-cluster load adjustments based on Alaskan microgrid conditions, tested on simulated grid data
- Built an MCP server exposing 5 tools the agent uses to query grid telemetry and propose load adjustments, and integrated the Anthropic API to drive the agent's reasoning
- Implemented telemetry visualization, a human-in-the-loop approval workflow, and a full decision audit trail; designed the data layer so live utility feeds can replace mock data with minimal code changes

Tech/Major Sales, Costco Wholesale | Fairbanks, AK Jun 2023 – Apr 2026

- Diagnosed hardware and software issues for customers and explained technical concepts clearly to non-technical users
- Contributed to year-over-year department sales growth by leveraging Technical & Sales expertise
- Trained and mentored ~5 new sales associates; named Employee of the Month (March 2026)

PROJECTS

Deadlock Stat Tool, Python Analytics CLI and Win Predictor

- Built a Python CLI that pulls player and match data from a public REST API and reports performance metrics and trends, including comparison against the average player at the same skill level
- Trained a basic logistic regression model to predict match outcomes from team composition
- Created into a discord bot so players can look up their stats from inside discord (Deployed using Railway)

Personal Web Portfolio, HTML, CSS, Bootstrap

- Designed and built a responsive, mobile-first portfolio with modular layouts and navigation components to showcase software projects

TECHNICAL SKILLS

Languages: Python, JavaScript, Typescript, C++, C, HTML, CSS
Frameworks & Libraries: React, Node.js, Express.js, Bootstrap, NumPy, Pandas, Pytest
Databases: MongoDB
Tools & Practices: Docker, Git, GitHub, GitHub, Leaflet, REST APIs, MCP, Anthropic API, Claude Code, Agile, Kanban, Figma, QGIS, Google Suite, Microsoft Suite
